

## Caring for your Pub Stuff Wooden Furniture

**All Pub Stuff wooden products are made from sustainable wood. They are solid wood not veneer. It is a natural product and will have individual grains and markings.**

Wood will also expand and contract depending on the humidity and this may mean that sometimes the bolts and screws need tightening to hold the product firm – this is especially necessary in the first few weeks.

**Do not overtighten.**

Some sanitisers will quickly damage your furniture. To keep your wooden furniture beautiful, you will simply need to wipe with warm soapy water and polish with a wood polish such as Pledge.

Do not place hot items directly onto Pub Stuff tables. **If it is too hot to hold, it is too hot for the table.**

If you need to move your tables, **DO NOT DRAG THEM ACROSS THE FLOOR.** Dragging will break your tables and Pub Stuff will not be liable for the damage caused in this way. Tables must be lifted evenly. Poseur tables should be lifted by the pedestal, not the top.
